Suwardi, Aswi, Muhammad Abdy, Bobby Poerwanto:

We have reached a decision regarding your submission to Indonesian Journal of Statistics and Its Applications, "Factors Affecting Types of Stroke: A Case Study of Stroke Centre Hospital in Makassar, Indonesia".

Our decision is: Revisions Required

Note:

- 1. The turnitin similarity result was 20%. Please fix again to lower the similarity.**
- 2. Revise the article according to the reviewer's suggestions below.**

Reviewer A:Recommendation: Revisions Required
-----**1. The title:**

1. contains a maximum of 15 words
2. without abbreviations
3. includes the scope of IJSA (statistics and its applications)
4. created in English.

(If the article is in Bahasa, use subtitles for that title.)

which needs to be completed in the article:

- includes the scope of IJSA (statistics and its applications)

2. The names of all authors are written without a title

Yes

3. The name of affiliation of each author listed only the names of colleges or organizations with the country. Example: Department of Statistics, IPB University, Indonesia.

Yes

4. The corresponding author must include his/her email in the article.

Yes

5. The abstract is written briefly and factually between 150-350 words, written in 1 (one) paragraph. Do not use abbreviations or citations in the abstract.

Yes

6. The Systematics only consists minimal of:

1. INTRODUCTION
2. RESEARCH METHODS
3. RESULTS AND DISCUSSION
4. CONCLUSION
5. REFERENCES

which needs to be completed in the article:

- All completed

7. No paragraph is only one sentence.

Yes

8. Throughout the manuscript, all citations and references are using Reference Manager Software (like Zotero or BibTeX).

Yes

9. Pictures, all pictures in the form of graphics, diagrams, schematics, photos are named with Figure (or Gambar (ID)), and made in the box/group/table so as not rupture when the layout created.

Picture listing procedure:

The pictures are numbered and the picture title, the center margin

Yes

10. A Table consists of several rows and is written as Table (or Table (ID))

Yes

11. REFERENCES:

1. Each article should have at least ten references.
2. All the sources contained in the reference is a quote stated in the script
3. References should contain references originating from primary sources (scientific journals and a minimum of 80% of the entire bibliography)
4. References should contain references from a new one with a minimum of 80% of the entire bibliography

which needs to be completed in the article:

- All completed

12. Remarks

1. The title must contain the statistical method used.

Reviewer B:
Recommendation: Revisions Required

1. The abstract must include:

1. a research objective

2. research methods
3. results
4. conclusions
5. created in English

which needs to be completed in the article:

- results

2. Keywords consist of three to five relevant words/phrases separated with comma, created in English. The keywords must be specific not too common.

No

3. The Systematics only consists minimal of:

1. INTRODUCTION
2. RESEARCH METHODS
3. RESULTS AND DISCUSSION
4. CONCLUSION
5. REFERENCES

which needs to be completed in the article:

- All completed

4. **The introduction** consists of:

1. the scope of the problem
2. the state of the art
3. what others have not done.

which needs to be completed in the article:

- All completed

5. **The Research method** must contain references.

Yes

6. **The Results and discussion** contain:

1. an interpretation of results according to goals or hypotheses
2. what the meaning, and
3. how they compare to other similar previous research.

which needs to be completed in the article:

- All completed

7. **CONCLUSION** consists of the conclusion that should be the answer to the questions and objectives of the study. Conclusions are expressed in a paragraph, not points, and are expressed not in statistical sentences. If necessary, at the end of the conclusion can also be written the things that will be done related to the next idea of the study.

No

8. Remarks

1. In the abstract, the results of the study should discuss the use of statistical methods (logistic regression models), and the conclusions should also add statistical methods, not just cases.
2. Keywords need to be added more specific. It's still too common
3. The image must not contain a title.
4. Table 2 needs to be formatted.
5. Conclusions need to be added to the discussion regarding the statistical methods used, not only from cases.
