Subject: Skill Competency Test Model (UKK) Graduates of Partnership-Based SMK: A Preparing Efforts Graduates Facing the Industrial Revolution 4.0

reviewer A

- Recent journal should be added.

reviewer B

The model that has explained is like face concept. There is no indicator about i4.0 that close to the "competency" in this article. There are mention about model will examine in abstract but in the content of the article there are not information about how to examine the model and the data after examined. The two indicator which is describe in the fig.2 is the main focus so please explain more detail especially not only "the name" but how to confine the indicators that is needed by the graduate of SMK .
Need proofreading

Skill Competency Test Model (UKK) Graduates of Partnership-Based SMK: A Preparing Efforts Graduates Facing the Industrial Revolution 4.0

Muhammad Rais

Department of Education of Agricultural Technology, Universitas Negeri Makassar, 90222, Indonesia, m.rais@unm.ac.id

Abstract—The challenge of education in Indonesia today is the swift development of industrial revolution that entered the 4th generation. Education at all levels of the educational unit, including Vocational High School (SMK) continues to make early preparations for industry era 4.0. Improving the quality of graduates becomes an urgent part of preparing superior human resources in the face of work world competition characterized by automation and digitization. Entering the industry era 4.0. This article examines the model of the certification test of competency certification of Vocational School as a reinforcement to the certification test model that has been formulated by the Directorate of Vocational Education. The model offered is that the competency certification test program should be divided into certification test of expertise as the main skill and competence test of computer field, language field (english and mandarin), and soft skill values as supporting competence.

Keywords: *Skill Competency Test, Partnership Based, Industrial Revolution 4.0.*

One of the indicators that SMK graduates have competencies that have high competitiveness is to have competency certification according to their expertise. Through a series of competency tests, SMK graduates can be said to have possessed a number of competencies covering key skills and supporting expertise. The main skills are the skills gained after the learners follow the process of education in the vocational school according to the skills that are followed, and end by taking the vocational theory and vocational practice exam. Supporting expertise is an additional skill that complements the main expertise and in its position provides recommendations that graduates with the support expertise are the added value of the graduate. Simultaneously confirmed that the graduates have been really ready to compete in the world of work. These support skills can include computer skills, language skills (english and mandarin) and soft skills.
